Ultra-small high-performance STB

Personal Device-PDE

IPTV applications for Personal Device Entertainment

Advanced Management of Google ChromeCast

Freedom to chose

A module-based system.

The solution has a long list to choose from that grows as the system is constantly under development .

You can choose the applications you need today and then add functionality when your requirements change.

This gives you the option to start with a basic IPTV system and invest in more advanced functionality later.

For most applications there is no need to add hardware, system updates are done with an over the air software update only

On your personal device

We all carry our own personal devices such as mobile phones, tablets and laptops. The IPTV system is available as a web application for personal device entertainment known as PDE.

With PDE you can let your crew, guests and passengers use the applications such as live TV, TV archive, VoD, Radio, Podcast and Information Portals on their own devices
